

Conservation status of Galiano Island Local Trust Area

The Galiano Island Local Trust Area is one of 13 local trust areas and island municipalities that make up the Islands Trust Area. The Galiano Island Local Trust Area, located 26 km northeast of the Swartz Bay ferry terminal, includes several associated islands. It is within the traditional territories of numerous First Nations who have cared for these lands and waters since time immemorial.

The Galiano Island Local Trust Area is home to some of the rarest ecosystems in the world that are under threat from development, climate change and habitat degradation. The

Islands Trust Conservancy does “nature check-ups” to measure the state of island ecosystems to see how well we are meeting the Islands Trust’s mandate to “preserve and protect”. Guided by a science-based Regional Conservation Plan, our work is important because, like the species and habitats that support us, the quality of human life depends on ecosystem health. We all have a part to play in protecting these fragile islands in the Salish Sea for future generations.

Species at risk

Killer Whale (*Orcinus orca*)

Northern Pacific southern resident population
Endangered (Federally), red listed (Provincially)

Peregrine Falcon, *anatum* subspecies (*Falco peregrinus anatum*)

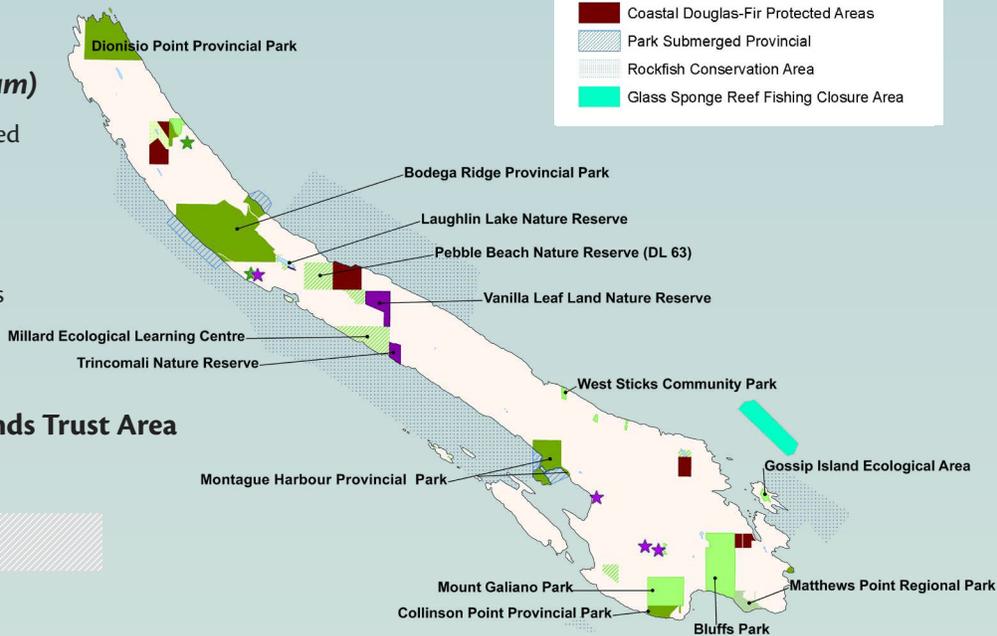

Special concern (Federally), red listed (Provincially)

These islands & islets are blanketed with wildflowers vulnerable to human impacts

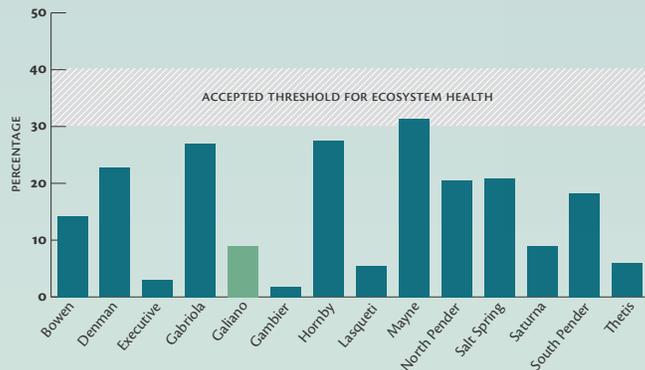

Parks & protected areas

22% PROTECTED

Land Converted to Human Use in the Islands Trust Area

Once land is converted for human use, that land is less available for nature. As land conversion reaches or goes above a 30-40% threshold, the number of species in a given habitat decline more rapidly.

How do forests help us?

CARBON EMISSIONS ABSORBED BY GALIANO FORESTS ANNUALLY

EQUIVALENT CARBON EMISSIONS EMITTED BY PASSENGER VEHICLES ANNUALLY

=

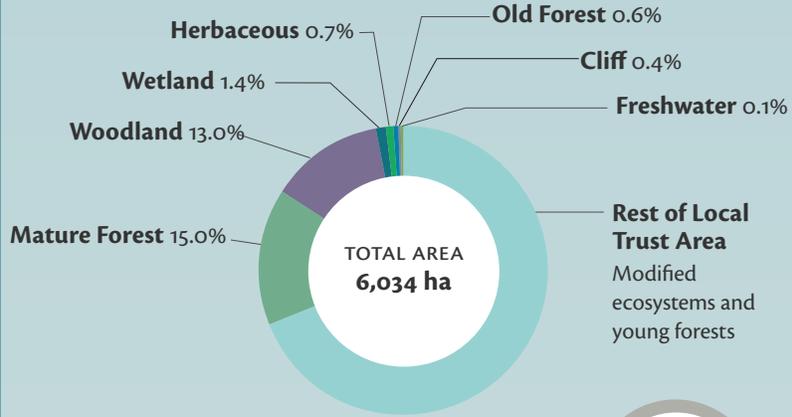

🌲 = 1,000 tonnes of carbon

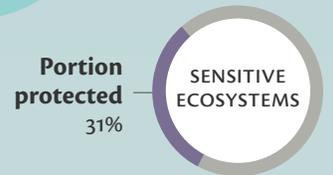

🚗 = 500 vehicles

The forests on Galiano Island sequester 17,187 tonnes of carbon/year which equates to removing the emissions of 3631 passenger vehicles per year. That's the equivalent of three vehicles/Galiano resident!

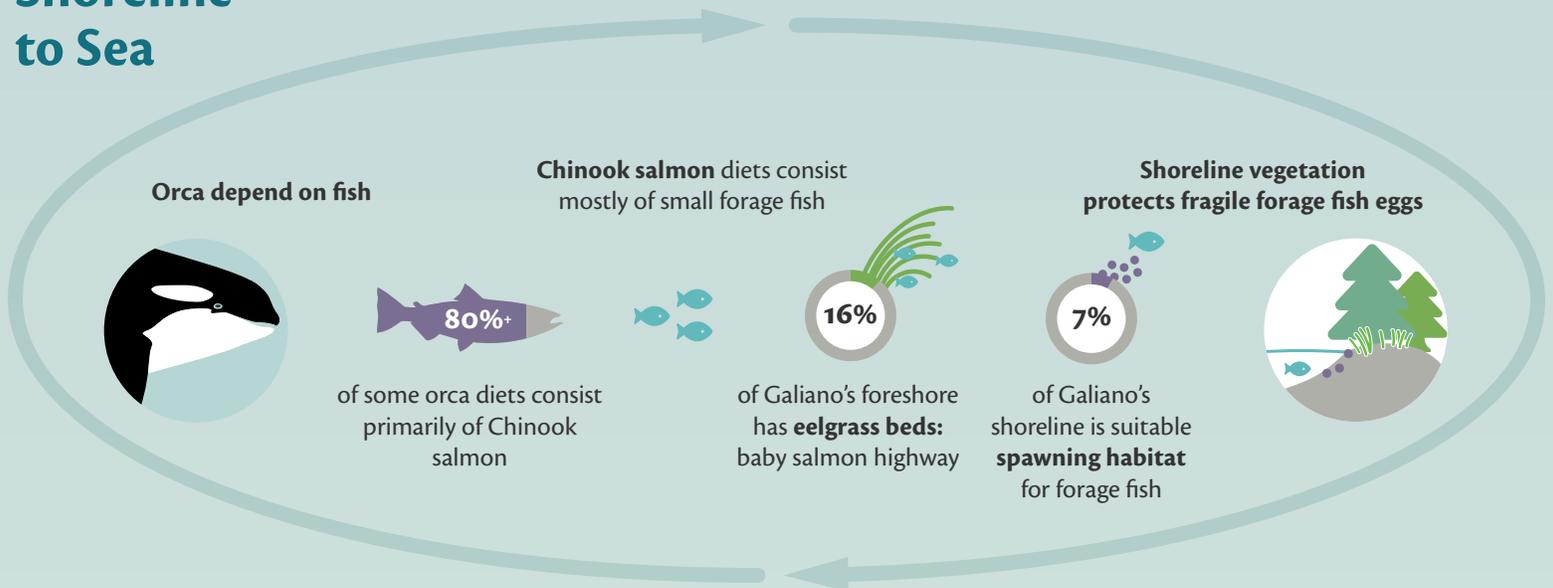

Sensitive ecosystems

Sensitive ecosystems are fragile and are often home to at-risk or endangered species.

Shoreline to Sea

Marine health starts at the shoreline. Your actions can make a difference!

Modified Ecosystems as of 2017

More than 65% of the Islands Trust Area is in private land ownership. Pressures to develop and change the natural landscape are tremendous. The Islands Trust Conservancy works with landowners to protect private land with conservation covenants, land donations, fundraising for nature, and stewardship.
